

INTRODUCTION

Greetings from far Belarus, String Samurai! Here is a quick start guide for CobbleStone power amp. Although CobbleStone looks like a regular pedal, it supplied by 24 volts and could damage your gear if used incorrectly. Please read guide carefully to the very end. Let's get it started!

CONNECTING

- ❶ **Sig** – connect your guitar processor/preamp/fx pedal here. Use ¼ TS (mono) instrumental cable for this;
- ❷ **AUX** – connect your player/smartphone here for playing with backtrack. Use 1/8 TRS (stereo) cable for this;
- ❸ **Power In** – connect DC 24V 3A power adapter here. Sparkle during plugging is normal;
- ❹ **Cab** – connect ONLY guitar speaker cabinet (4 to 16 Ohm) here by ¼ TS (mono) speaker cable. Optimal load is 8 Ohm;
- ❺ **Master** – adjusts output volume;
- ❻ **Tone** – adjusts tone for Sig input. Center position has no effect and keeps input signal intact;
- ❼ **Power** – indicates that power is plugged in;

- ❽ **Limit** – mutes CobbleStone output and indicates one of the following faults:

- Input/output amplitude is too high;
- Overheating;
- Short circuit in load;

Please fix the reason of LIMIT indication to unmute CobbleStone output.

TECHNICAL SPECIFICATIONS

Output power: 45 Watts;

Load: 4 to 16 Ohm (8 Ohm optimal);

Power supply: 24V 3A, 5.5*2.5 plug, center positive;

Frequency response: 20-20000 Hz;

Sig impedance: 47 kOhm;

AUX impedance: 10 kOhm;

CobbleStone dimensions/weight: 114*68*33 mm/196g;

Power Supply dimensions/weight: 127*55*32mm/ 210g.

DO NOTs:

- DO NOT CONNECT AMP OUTPUT TO ANY OTHER DEVICE EXCEPT GUITAR CABINET;
- DO NOT EXCEED 24 VOLTS SUPPLY;
- DO NOT CONTACT ANY METAL SURFACES INCLUDING PEDALS HOUSINGS WITH OUTPUT JACKS;
- DO NOT THINK CLASS-D AMPLIFIERS ARE NOT GOOD ENOUGH FOR YOU.

WARRANTY
